

STORAGE

After purchase, carefully empty seed potato contents into shallow boxes or trays. Egg boxes or apple trays are ideal. Protect from frost and store in a cool area.

POTATO

GROWING GUIDE

1. CHITTING

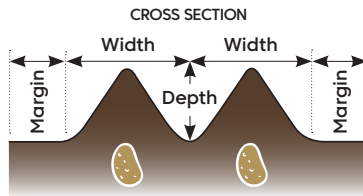

Two weeks before planting move the potatoes into natural light and a temperature of about 10°C (50°F). Sprouts should appear. This step is optional, but may improve grow time. The potatoes may turn green when exposed to light, this is normal. Protect from frost.

2. PLANTING

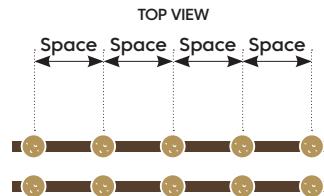

Dig your potato plot in Autumn or Spring so the potatoes can easily be planted once soil temperatures are over 8°C. See packaging for specific variety guide, or estimate below.

MATURITY	PLANT	DEPTH	WIDTH	MARGIN	SPACE	HARVEST
First Early	Mar-Apr	15cm 6"	60cm 24"	30cm 12"	25cm 10"	June-Aug
Salad	Mar-May	15cm 6"	60cm 24"	30cm 12"	25cm 10"	July-Sept
Second Early	Apr-May	15cm 6"	70cm 28"	35cm 14"	30cm 12"	July-Sept
Maincrop	Apr-May	15cm 6"	70cm 28"	35cm 14"	37cm 15"	Sept-Oct

How to make your drills

Potato Spacing

3. GROWING

When potatoes have emerged a few inches, pull earth around the plant with a rake, leaving peaked rows. Earthing-up gives the plant more soil to grow in, stops sunlight turning exposed tubers green, and improves drainage. It is also a quick and effective way of controlling weeds. Repeat the process as required, until the foliage is too big. Use frost blankets, tunnels, or greenhouseing to protect your crop from frost.

4. HARVEST

First Earlys are best enjoyed when they are small and fresh in June/July/August and Second Earlys follow on. Maincrop varieties are best left until October for size and skin set.

Once the Maincrop foliage has died back the potatoes should be left in the ground for 2-3 weeks to allow the skins to set, ready for storing. Before harvesting, carefully scrape away some soil and check the potatoes have grown to the size that you like.

DUKE OF YORK

SEED POTATOES

FIRST EARLY

PLANT Mar-April
HARVEST June-Aug

Harvest 10-12 weeks after planting subject to weather.

Duke of York seed potatoes were first entered onto the national list back in 1891 and soon became famous for their great taste and all-round culinary uses in the kitchen. The potatoes have yellow flesh and are oval in shape. An ideal early to boil straight from your garden. Once they are boiled the potatoes are dry and mealy. Duke of York has good resistance to dry rot.

FOREMOST

SEED POTATOES

FIRST EARLY

PLANT Mar-April
HARVEST June-Aug

Harvest 10-12 weeks after planting subject to weather.

When Foremost was first added to the national variety list in 1954 it was called Suttons Foremost. This variety was an instant hit with gardeners who liked its excellent flavour and resistance to disintegration when boiling. With average sized yields and disease resistance. It does have good common scab resistance, potatoes are short to oval in shape with white skin and waxy white flesh.
